

Opportunities to reduce, postpone and rethink the need for long-term care

The case of needs assessment

The Global Observatory of Long-Term Care celebration of the
UN International Day of Care and Support

GLOBAL
OBSERVATORY
OF LONG-TERM
CARE

Defining and assessing the needs for long-term care

- The moment of truth for LTC systems – and for (potential) users
 - Different rationales and eligibility criteria
 - Different shares of beneficiaries
 - Unequal access
- How are needs assessed – and by whom?
 - Assessment instruments and criteria
- Rethinking and improving needs assessment
 - Incentives for ageing in place, investment in prevention
 - Allocation criteria for targeting or developing „caring societies“?
 - Linking individual needs assessment and local/regional care management

Diverging rationales for needs assessment

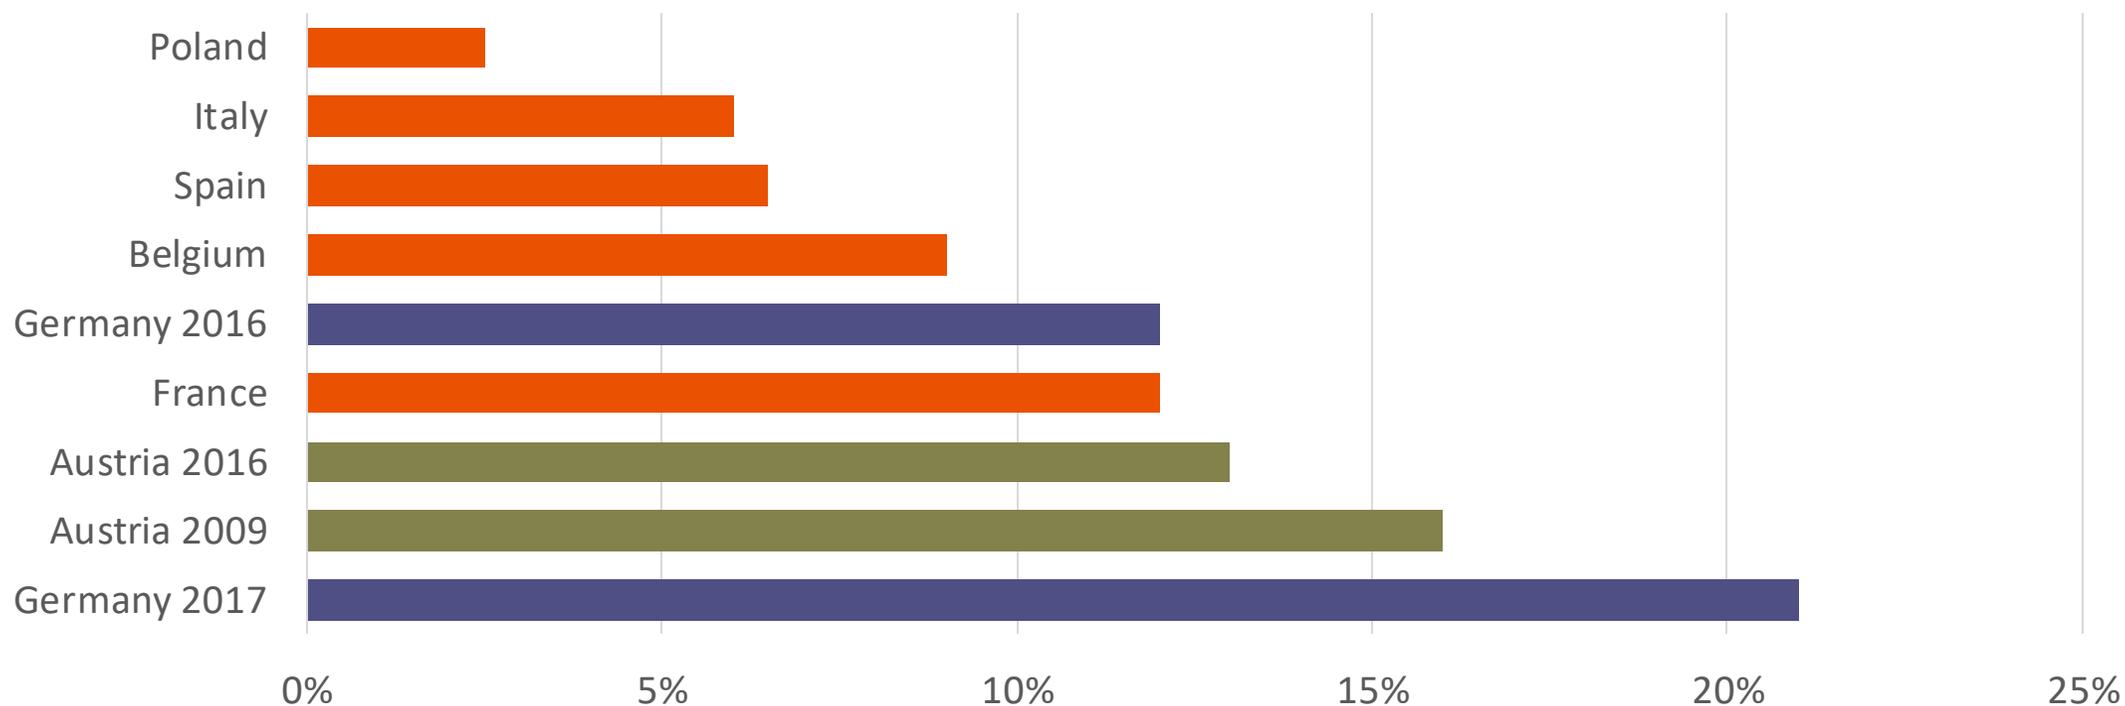

- To assess eligibility on legal and administrative grounds
 - Gate-keeping based on the medical model of long-term care, but ...
 - Moving from physical restrictions (“invalidity”) to restrictions in ADL/IADL (nutrition, personal hygiene, mobility, cooking, housekeeping, transport etc.)
 - Moving towards inclusion of cognitive or other mental health problems (dementia)
- To assess care needs in terms of “time needed for care”,
- To consider multi-professional perspectives in developing a care plan
- To move from deficit-oriented assessment schemes to resource-oriented perspectives
 - Assessment in the context of living conditions
 - Carer-blind or carer-sighted?
 - Involving the person in need of care and informal carers?

A wide range of instruments to classify needs

- Different weights for different limitations, resulting in scores and categories
 - Different scores, number of categories and thresholds
 - Different indicators for “self-sufficiency” (e.g. DE)
- Minimum thresholds for care needs expressed in time
 - Different categories based on the amount of time allocated to care (e.g. AT: at least 65 hours/month and 7 levels; LU: 15 categories)
- Nationwide vs. regional/local assessment schemes to access the LTC system
 - Cash benefits
 - Services in kind (residential and community care)
 - Other support, e.g. informal carer schemes

Defining eligibility criteria – with massive consequences

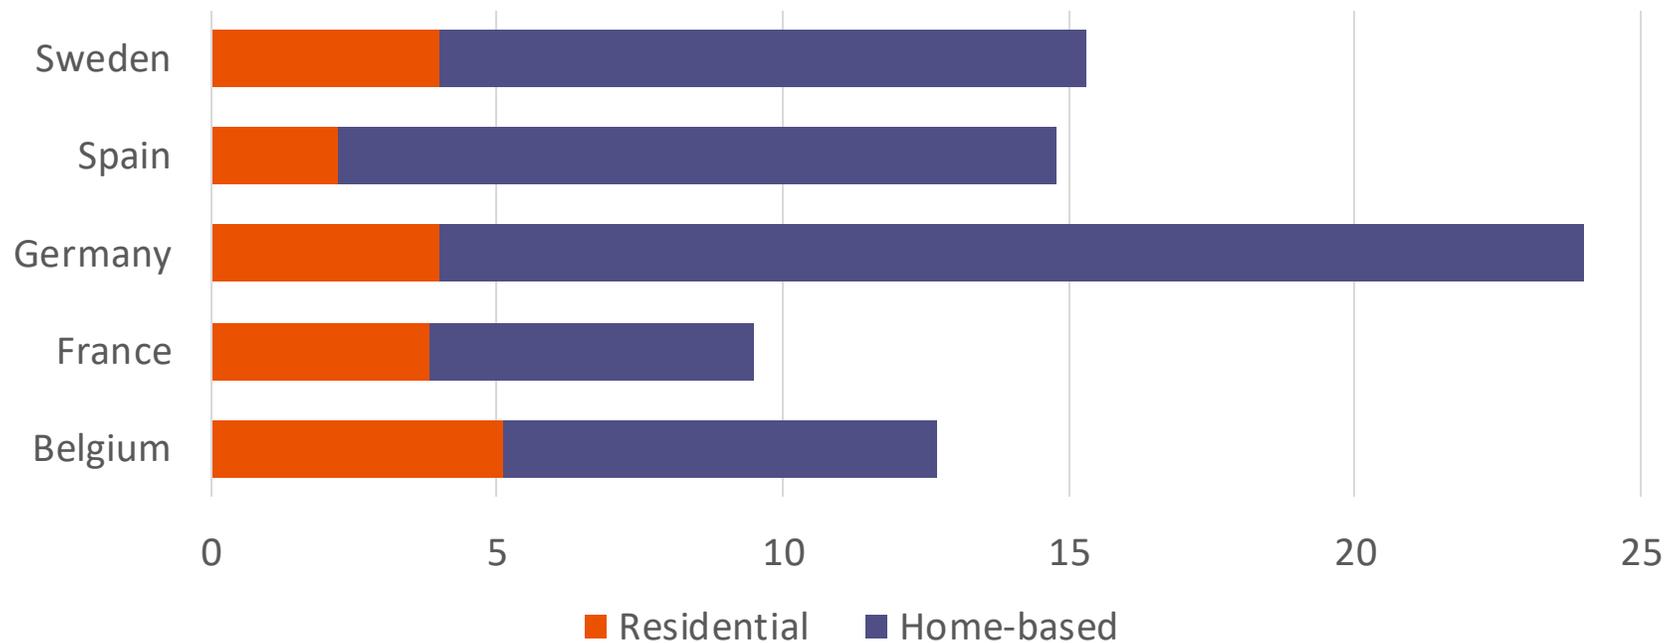

Share of older Europeans (65+) potentially covered by different LTC eligibility rules

Source: Carrino et al., 2025, based on SHARE (6th wave, 2016).

The impact of eligibility criteria on service use

The case of Italy

Care allowance in Italy: Dynamics of growth in number of beneficiaries and its value, 2022 – 2023, constant prices

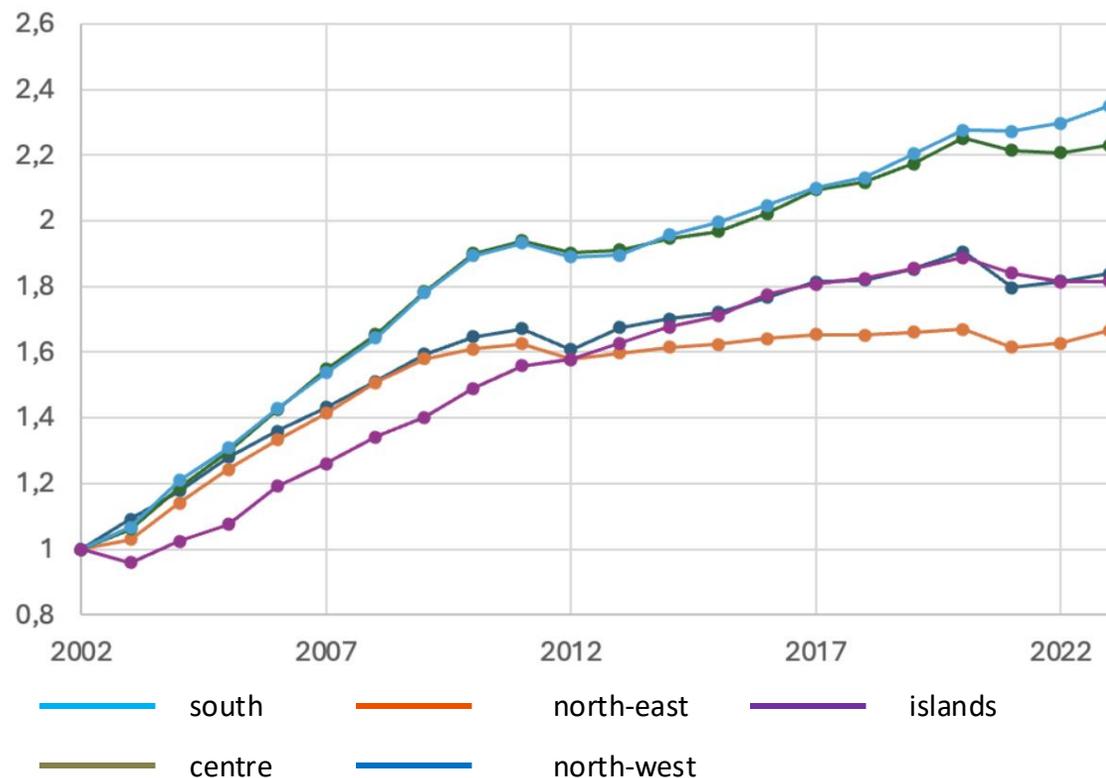

Source: Audino et al., 2024.

- Indennità di accompagnamento (care allowance) as a lump-sum cash benefit
 - needs-tested, no means-testing
- Rising number of beneficiaries (right scale)
- Reduced value: due to indexation based on the development of nominal wages, rather than being adjusted for inflation (left scale)
- Total expenditure increased from 0.37% (2002) to 0.8% (2020) and eventually to 0.65% of GDP in 2023

The case of Italy

Care allowance in Italy: Differences in growth between macro-regions, 2002 – 2022

Source: Audino et al., 2024.

- Differences in growth between macro-regions cannot be explained by demography (data are controlled for age)
- Assessment by medical doctors is lacking homogeneity
- Care allowance as a means to reduce (pension) poverty and/or as an incentive to employ live-in carers (badanti)
- Clear eligibility criteria needed

Rethinking needs assessment

Conclusions

- Needs assessment to combat inequalities in access to long-term care
 - Define clear eligibility rules that are long-term care needs-specific and comprehensive (in context)
 - Combine assessment procedures with information and counselling (also of informal carers)
 - Consider the needs assessment procedure as an investment to strengthen prevention, rather than a gate-keeping exercise
- Needs assessment to combat care poverty by integrated care management
 - Design needs assessment as the entry-point to the long-term care system, including the involvement and integration of relevant stakeholders
 - Utilise outcomes of individual needs assessment as a data base for local/regional care planning and management
 - Use data from the assessment to steer persons in need of LTC through the system

Thank you!
